         * @typedef {Object<string, any>} Data
         * @property {boolean} success - Whether the login was successful
         * @property {string} token - The data returned from the login i.e. Fire Token
         */

        // data.token is the message sent from the fireOAuthChannel after verification
        // data.success is a boolean that indicates whether the verification was successful
        // data.token is the fire token
        // What to do with the Fire Token?

        // * Fire Token is an unique token which uniquely identifies the user who authorized your login
        attempt with Fire

        // * You can use this token ONLY ONCE as it will be destroyed after the first use
        // 1. Send the fire token to the Fire Server to verify the user
        // - You can do that client sided or server sided
        // - You need to send a POST Request to the Fire Server with the fire token
        // at the URL: http://localhost:3003/api/tokens/verify
        // - The Fire Server will verify the fire token and return a response
        // - If the verification was successful - CODE (200), the Fire Server will return a response with the
        user's data

        // - If the verification was unsuccessful - CODE (400) or CODE (401), the Fire Server will return a
        response with an error 'message'

        // - You can use the data returned from the Fire Server to create a new user in your database
        // This example will send the token to Fire Servers and console.log the response console.log("%c"
        + `Fire Token: ${data.token}`, `color: #f1c40f; font-weight: bold;`); const response = await

    /**

     * @typedef {Object<string, any>} Data

     * @property {boolean} success - Whether the login was successful

     * @property {string} token - The data returned from the login i.e. Fire Token

     */

    // data.token is the message sent from the fireOAuthChannel after verification

    // data.success is a boolean that indicates whether the verification was successful

    // data.token is the fire token

    // What to do with the Fire Token?

    // * Fire Token is an unique token which uniquely identifies the user who authorized your login
    attempt with Fire

    // * You can use this token ONLY ONCE as it will be destroyed after the first use

    // 1. Send the fire token to the Fire Server to verify the user

    // - You can do that client sided or server sided

    // - You need to send a POST Request to the Fire Server with the fire token

    //   at the URL: http://localhost:3003/api/tokens/verify

    // - The Fire Server will verify the fire token and return a response

```

```

        // - If the verification was successful - CODE (200), the Fire Server will return a response with the
        user's data

        // - If the verification was unsuccessful - CODE (400) or CODE (401), the Fire Server will return a
        response with an error 'message'

        // - You can use the data returned from the Fire Server to create a new user in your database
